Education

- University of Wisconsin- Madison, Madison WI, USA
 - Ph. D.** Electrical Engineering Sep 2012 – Jun 2017
Dissertation: *Algebraic Set Preserving Mappings for Electric Power Grid Models and Its Applications*
Advisor: Prof. Bernard Lesieutre
 - M. S.** Electrical Engineering Sep 2012 – May 2014
Advisor: Prof. Bernard Lesieutre
- Huazhong University of Science & Technology, Wuhan, China
 - B. E.** Electrical Engineering & Automation Sep 2008 – Jun 2012
Advisor: Prof. Xianzhong Duan

Professional Experience

- **Postdoctoral Associate**, LIDS, MIT Jan 2019 – present
Advisor: Prof. Marija Ilic and Prof. Eytan Modiano, LIDS, MIT
 - Learning-based failure cascade studies for congestion, stability, and optimality.
 - Corrective control designs for dynamic watermarking injected micro-grids under cyber-physical attacks.
 - Optimality research in energy space control and optimal scheduling studies for multi-energy HVAC systems.
 - Development of slow transient natural gas network models for simulating line-pack depletion (the first ODE model that can capture system-wide mass flow imbalance).
 - Voltage stability studies on algebraic manifolds (the first work of voltage stability on manifolds).
- **Postdoctoral Associate**, MechE Dept., MIT Jul 2017 – Jan 2019
Advisor: Prof. Konstantin Turitsyn, MechE, MIT
 - Loadability region studies in natural gas networks: development of a fast loadability approximation algorithm (the first inner approximation tool in natural gas networks).
 - Nonlinear bifurcation studies in power system sustained oscillations (the first report of the Chenciner bifurcation in power systems).
 - Development of a fast holomorphic embedding tools for solving all connected power flow solutions.
- **Research Assistant**, ECE Dept., UW-Madison Jan 2014 – Jun 2017
Advisor: Prof. Bernard Lesieutre, ECE, UW-Madison
 - Nonlinear optimization studies: development of the first deterministic solver searching for multiple local extrema of the optimal power flow problem.
 - Development of a fast branch tracing algorithm for solving all connected power flow solutions (the first report of connected solution sets for IEEE 30, 39, 57 bus systems).
 - Data obfuscation studies for multi-party optimal power flow problem in cloud computing (the first obfuscation technique for nonlinear AC optimal power flow problem).

Research Areas & Interests

- **Energy Systems under Climate Change:** Reliability, Survivability, Resiliency, Failure cascades.
- **Electric Power Grid:** Cyber-security, Renewable energy, Learning-based power system analysis and optimization.
- **Natural Gas Network:** Loadability, Linepack depletion, Survivability.
- **Communication System:** Congestion propagation.

- **Optimization:** Machine learning, GCN, RNN, Nonlinear optimization, Global optimization.
- **Control Systems:** Cyber-secure corrective control, Nonlinear systems, Optimal control, Bifurcation.

Honors & Awards

- **2019 Best Reviewer Award** for *IEEE Transactions on Smart Grid*.
- **Global Stewards Sustainability Prize**, Wisconsin Energy & Sustainability Challenge, Wisconsin, 2013. Proposed an energy storage system using a quicksand pit that can be used in arid regions.
(<https://energy.wisc.edu/news/creative-energy-harvest-and-storage-ideas-top-energy-and-sustainability-competition>)
- National College Mathematics Competition (Applied-Math Group), the **Third Prize** in China, 2010.
- National College Mathematics Competition, the **First Prize** in Hubei Province (**Top 5**), 2009.
- Best Student Honor, Huazhong Univ. of Sci. & Tech., China, 2012.

Contributions to Benchmarks

- **Dan Wu**, Bin Wang, July 1, 2019, "COLLECTION OF NUMEROUS POWER FLOW SOLUTIONS OF STANDARD IEEE TEST SYSTEMS", IEEE Dataport, doi: <https://dx.doi.org/10.21227/24bh-hj72>. (The most complete power flow multi-solution collection for IEEE 14, 30, 39, 57-Bus benchmark test systems. Up to 25686 many real-valued solutions for some test case.)

Contributions to Proposals & Projects

- C3.AI Digital Transformation Institute on Digital Transformation and AI for Energy and Climate Security, “*A learning-based influence model approach to cascading failure prediction*”, \$250,000, Oct 2021 – Oct 2022.
PI: Prof. Eytan Modiano (MIT), co-PI: Dr. Marija Ilic (MIT), Prof. Vincent Poor (Princeton)
Role: Writing the proposal and leading the power system failure cascade study.
- DOE Grant DE-EE0009031, “*Secure Monitoring and Control of Solar Power Distribution Systems through Dynamic Watermarking*”, \$4,400,000, Jul 2020 – Jul 2024.
PI: Prof. Le Xie (TAMU), co-PI: Dr. Marija Ilic (MIT), Dr. Dongbo Zhao (ANL), Prof. Zuyi Li (IIT).
Role: Leading the corrective control research when cyber-physical attack is detected, preparing regular reports.
- ENN Digital Award “*Dynamic Monitoring and Decision Systems (DyMonDS) framework for IT-enabled engineering of retail-level energy services (RES)*”, \$400,000, Mar 2019 – Mar 2022.
PI: Dr. Marija Ilic (MIT).
Role: Leading the multi-energy HVAC system modelling and optimization research, preparing regular reports.
- NSF Grant CNS 1735463, “*Critical Resilient Interdependent Infrastructure Systems and Processes (CRISP) Type 2 Collaborative Research: Understanding the Benefits and Mitigating the Risks of Interdependence in Critical Infrastructure Systems*”, \$1,199,898, Jan 2018 – Dec 2021.
PI: Prof. Eytan Modiano (MIT), co-PI: Prof. Konstantin Turitsyn (MIT) and Prof. Amy Glasmeier (MIT).
Role: Leading the natural gas modelling, communication congestion modelling, and resilience studies; preparing

project annual report.

- NSF Grant AMPS 1735928, “*Algebraic Geometry under Uncertainty for Power Flow Systems*”, \$229,179, Sep 2017 – Aug 2019.

PI: Prof. Nigel Boston (UW-Madison), co-PI: Prof. Bernard Lesieutre (UW-Madison).

Role: Writing the proposal and leading the power flow modelling.

- NSF Grant CNS 1329452, “*Preserving confidentiality of sensitive information in power system models*”, \$678,376, Oct 2013 – Sep 2017.

PI: Prof. Parameswaran Ramanathan (UW-Madison), co-PI: Prof. Bernard Lesieutre (UW-Madison).

Role: Leading the AC optimal power flow data encryption studies.

Conference Presentations & Invited Talks

- “A Hybrid Learning and Model-Based Optimization for HVAC Systems: A Real World Case Study,” 2022 PES General Meeting, Denver, CO, Jul 19, 2022.
- “Cyber-Physical Secure Observer-Based Corrective Control under Compromised Sensor Measurements,” 2022 American Control Conference (ACC), Atlanta, GA, Jun 8, 2022.
- “Searching for multiple real-valued solutions to the power flow problem,” 2022 American Mathematical Society (AMS) Spring Western Sectional Meeting, Denver, CO, May 15, 2022.
- “Differential Geometry Methods in Electric Energy Systems with Distributed Renewable Energy Resources,” LIDS Tea Talk, MIT, Cambridge, MA, US, Oct 27, 2021.
- “On the Validity of Decomposition for Distributed Parameter Estimation in Complex Dynamical Systems: The Case of Cooling Systems,” 52nd North American Power Symposium (NAPS), April 11, 2021.
- “Searching for a better optimum for the nonconvex OPF problem,” Electric Power Systems Seminar Series, LIDS, MIT, Cambridge, MA, US, Oct 18, 2019.
- “Influence of Load Models on Equilibria, Stability and Algebraic Manifolds of Power System Differential-Algebraic System,” 57th Allerton Conference on Communication, Control, and Computing, Monticello, IL, Sep 25, 2019.
- “Enumerating Multiple Local Optima for the Optimal Power Flow Problem,” 2018 INFORMS Annual Meeting, Phoenix, AZ, Nov 4, 2018.
- “Interdependence between Electric Power and Natural Gas Networks,” 2018 PES General Meeting, Portland, OR, Aug 8, 2018.
- “Introduction to Persistent Homology and Applications to Power System Analysis - A Tutorial Section,” Nexus Power Seminar, Department of Mechanical Engineering, MIT, Cambridge, MA, US, Jan 25, 2018.
- “Identifying Multiple Real-Valued Solutions for the Power Flow Problem and for the Optimal Power Flow Problem,” School of Engineering and Applied Sciences, Harvard University, Cambridge, MA, US, Oct 4, 2017.
- “Identifying Multiple Real-Valued Solutions for the Power Flow Problem and for the Optimal Power Flow Problem,” Nexus Power Seminar, Department of Mechanical Engineering, MIT, Cambridge, MA, US, Jul 26, 2017.
- “An Efficient Method to Locate All the Load Flow Solutions- Revisited,” 53rd Annual Allerton Conference on Communication, Control, and Computing, Monticello, IL, Sep 30, 2015.
- “Let Sand Work - Pumped Quicksand Storage Pit Project,” Wisconsin Energy & Sustainability Challenge, Madison, WI, Apr 17, 2013.

Supervising & Teaching Experience

- PhD Student Supervised
 - Xinyu Wu (with HO-CHING and HAN-CHING award), Ph.D. candidate, MIT Jan 2019 – present
 - Suhyoun Yu, Ph.D., MIT Jan 2018 – Apr 2022
 - Samuel C. Chevalier, Ph.D., MIT Jan 2018 – Jan 2021
- MS Student Supervised
 - Premila Rowles, M.S., MIT Jan 2020 – Apr 2022
 - Ruihao Zhu, M.S., UW-Madison Jan 2016 – Aug 2016

- Guest Lecturer (6 Class Sessions), ECE 427 Electric Power Systems, UW-Madison Sep 2016 – Dec 2016
Instructor: Prof. Bernard Lesieutre
- Teaching Assistant, ECE 409 Introduction to Feedback Control Lab, UW-Madison Sep 2013 – Dec 2013
Instructor: Prof. Dan Cobbs

Professional Service

Editorial Positions

- Guest Editor, *IET Smart Grid, Special Issue on Transition Towards Deep Decarbonization of Modern Energy Systems, 2021*

Conference hosts:

- Chair, 2022 American Control Conference (ACC), “Estimation III” Session, Jun 8-10, 2022, Atlanta, GA.
